Subject: Sequence search 08/879,827

Please search regular and interference databases for Seq 3-5, 100-111. Results on disk, and please put the interference on a separate disk.

There will probably be a follow-up search request, as I'm looking for a method using a nucleic acid which encodes a polypeptide comprising a domain at least 35% identical to SEQ 4 or SEQ 5. Perhaps you could prevent the follow-up request if you display more than 15 hits for the SEQ 4 and SEQ 5 searches (I don't know what number to suggest, though).

Thanks. Mary Mosher, AU 1641, CM1 9A17, 308-2926.
